1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.
2. Claims 11-16 and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In each of claims 11 and 13, the numeral “i” is not defined for its range. Similarly, in each of claims 14 and 16, the numerals of “N” and “E” are not defined for their ranges.

In claim 23, line 1, “Apparatus” should read as –A network--.

3. Claims 17-29 are also rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the spoke nodes coupling to the hub node via plurality of links in the star network.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 11, 13, 14, 16-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over YANO in U.S. Patent No. 4,516,272 (newly cited).

YANO discloses a star network having a hub node and a plurality of spoke nodes and a plurality of multichannel multiplexed links, each having even number of channels for interconnecting the nodes to one another (see abstract, col. 2, line 50 to col. 3, line 50, col. 6, lines 7-61) as in claims 11, 13, 14, 16-29.

YANO fails to specifically disclose the feature of dividing the even number  $W$  of channels in each link into two sets, providing a star network configuration such that channel  $i$  on any link may be connected to channel  $w(i)$  on any other links, where  $w(i) = i + W/2$ , which is a simple network configuration algorithm and well known in the art, which can be easily adopted by one of ordinary skill in the art into the network of YANO to provide a specific network configuration as per request by design choice.

7. Claims 12 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ota and Brown et al. are additionally cited to show the feature of star type optical communication network comprising hub node and spoke nodes similar to the claimed invention.
